

TESTED LIKE
YOUR LIFE
DEPENDS ON IT.

 **TOYOTA**
oh what a feeling!

BUILT LIKE NO OTHER.

When we start designing your Toyota, we start designing its bull bar. That way, it looks better and works in perfect harmony with the vehicle.

PASSENGER AND DRIVER SAFETY, for example, is optimised with crumple zones and bull bar working seamlessly to ensure the bull bar doesn't crumple into the vehicle in the event of an accident. The mounting systems have also been designed to distribute the impact and winch loads evenly over the vehicle's chassis and, more importantly, ensure the airbags are deployed at precisely the right time.

Just as your Toyota is put through EXTENSIVE TESTING, so too are Toyota Genuine Bull Bars so that they deliver optimum strength and durability.

ALLOY BULL BARS are lightweight and extremely strong. They protect your vehicle from scrapes while providing, like all Toyota bull bars, a rugged, stylish appearance. For heavy duty protection, STEEL BULL BARS are your best choice with bumper replacements providing mounting points for a winch.

All Toyota Genuine Bull Bars come with a 3-YEAR/100,000km WARRANTY if fitted at the time of purchase. For all their toughness, these bull bars are the result of a huge amount of research, testing and engineering which makes them the ideal choice for your Toyota. Ask your Dealer for further information.

These bars provide excellent ground clearance and approach angles to minimise damage to your bull bar's 'wing area' in the event of hitting an animal

Toyota bull bars incorporate airbag sensors to ensure they are deployed at precisely the right time

Mounting systems spread the impact of an accident over the vehicle chassis

Customised vent areas optimise airflow so your vehicle won't overheat

Headlights and fog lights aren't obstructed thanks to customised driving light mounts and mouldings
